## Workforce Safety and Rescue Solutions for Industry and Utilities

- Emergency Planning
- Health and Safety Policies
- Water Safety and Rescue
- Commercial and Industrial Water Rescue Teams
- Workforce Safety
- Management Services
- Specialist Training

### Do I Need Water Safety?

It is a requirement under the Health and Safety at Work Act 1974 that Employers required to ensure, as reasonably practicable the HSW of employees and provide a safe working environment and necessary PPE. This includes working on or near water.

In addition, The Construction (Health, Safety and Welfare) Regulations 1996, Regulation 35 requires employers engaged in construction work to take all reasonably practical measures to prevent persons falling into water and drowning.

So, YES you do need to think about water safety for your project to ensure your workforce stays safe.

## FLEXIBLE SOLUTIONS FOR YOUR BUSINESS

### EMERGENCY RESCUE PLANS

With a team of advisors with years of pre-hospital medicine and medical services experience along with over twenty years as search and rescue team volunteers and officers in charge we bring this knowledge to our customers to help with your rescue planning as part of your safe systems of work.

Our emergency planning, resilience and response department can help provide a tailored solution for emergency planning working along set guidelines from HSE for method statements, risk assessments and contingency planning.

We have provided many in-house full rescue team proposals and plans for commercial medical and rescue projects in recent years.

### HEALTH AND SAFETY POLICIES

Working with your own Health and Safety team we can advise on the drafting of general health and safety policies as well as providing on-site risk assessments, audits of first aid equipment and training and other specialist areas of work.

The Management of Health and Safety at Work Regulations 1996 Regulation 3 requires employers to undertake suitable risk assessments for employees and appropriate risk control measures.

Contact us to see how we can help you to stay compliant with Health and Safety Legislation.

- General Health and Safety Policies for Businesses
- Specialist Risk Assessments
- First Aid and Rescue Audits
- Site Visits and Inspections
- Specialties in Working Near or On Water
- Years of Emergency Services Experience

## **WATER SAFETY TEAM**

Our Workforce Safety Unit is available for both commercial and industrial safety, workforce protection, safety and rescue cover and for short-term and long-term contracts.

### **TECHNICAL SAFETY OFFICERS**

We recruit our Specialist Safety Officers from the emergency services, former military, voluntary rescue and also some direct entrants.

This gives us a good mix of abilities and experience. All staff follow our training programme which involves nationally and internationally set syllabus and accredited training in both water rescue and medical skills.

We pride ourselves on our 'can do' approach and will always provide fully equipped, trained and neatly uniformed staff.

We have provided emergency planners, incident managers, first aiders, medics and water rescue specialists to businesses, construction projects, film and TV and events for many years.

Our staff will always be there, as needed, for as long as required and equipped with suitable training, equipment and vehicle for the job and location.

- Trained and Qualified Staff.
- Safety Officers available for supervisory cover or advice.
- Fully Equipped discreet or signwritten Response Vehicles and 4x4's.
- All our services are charged at a 'transparent' hourly rate system. The price quoted is the price you pay.

## **BESPOKE SOLUTIONS**

**We can provide solutions for all your first aid, rescue and health and safety needs that are tailored to the exact situation of your business or organization at any site.**

## **COST EFFECTIVE SOLUTIONS**

**We believe in a 'no hidden costs' approach in all of our invoicing. Any and all charges are clearly set out in our transparent pricing structure**

## **FACE TO FACE OR E-MEETINGS**

**While face to face meetings are often the 'best way' to do business. We do understand that due to the distances involved at times communications may have to be via email or eMeetings, especially in the post-covid 19 world.**

## COMMERCIAL/INDUSTRIAL WORKFORCE SAFETY

Our Commercial Workforce Safety Unit staff are also able to provide other specialist rescue skills. They are a multidisciplinary team, trained in water rescue, confined space and rope rescue.

They normally work from an all-wheel drive (or 4x4) response unit carrying all their medical equipment and any specialist rescue equipment and PPE (Personal Protective Equipment) that they may need for the duty.

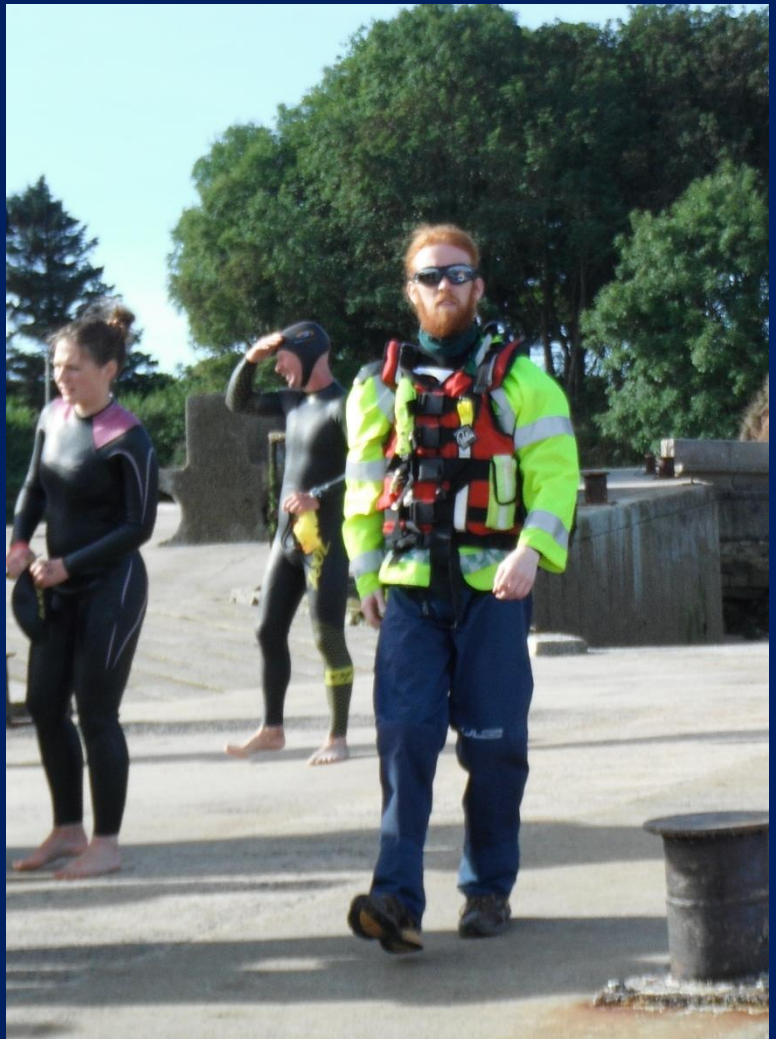

Our staff are trained to deal with most daily emergencies and we can also provide specialists who are trained to coordinate larger incidents as the 'operational' command level until arrival of the statutory emergency services.

We can also assess and help organizations with their emergency coordination planning as part of the role while on site.

### SPECIALIST TRAINING

We can provide specialist awareness level training (SWAH, Water Safety) and other bespoke courses for businesses and other organisations.

Contact us for a copy of our training brochure.
