- Site Surveys
- Risk Assessments
- Emergency Planning
- Incident Management
- Workforce Safety Teams
- At Height Rescue
- Casualty Carers
- Rope Rescue
- SWAH Rescue
- Water Safety and Rescue

### Why Hebog Specialist Solutions?

When thinking about workforce safety standby and rescue cover at your shutdown or construction site you need to think about more than just cost.

We are experienced medical and rescue specialists with years in the fields of pre-hospital medicine, casualty care, pre-hospital medicine and specialist rescue and can give visible additional reassurance to your staff that should things go wrong, we will be there to help.

## FLEXIBLE SOLUTIONS FOR HEAVY INDUSTRY, UTILITIES, AND COMMERCIAL CLIENTS

### RISK ASSESSMENTS AND EMERGENCY PLANS

Even before your work takes place, you should be thinking about your risk assessments, method statements and emergency plans. With a team of serving and former emergency service specialists with years of pre-hospital medicine, technical rescue and fire services experience, along with our directors twenty years as a search and rescue team volunteer and officer in charge we can and do bring this knowledge and experience to our customers to help with their emergency rescue planning.

Our emergency planning department can help provide a tailored solution for emergency planning, working along guidelines such as those set out by the HSE. These plans can be very simple in the case of small works to documents of over fifty pages for larger projects.

### SITE SURVEYS

We advise that before works commence, one of our safety supervisors who specialise in working at height and rope rescue visit the site to assess for themselves the hazards and risks involved, both in the work being undertaken, and the site itself.

This visit will be followed with a report with our impartial recommendations for both the works and the suggested safety provision (if necessary).

### DO I NEED A STAND BY TEAM?

Honestly, that is your decision. Lots of courses have 'rescue' content, but does a one day, or less, course ensure you have provided the best protection for your own workforce?

We can advise on requirements, and will only suggest what we feel is the ideal to cover your obligations under the Working at Height Regulations 2005.

## HEIGHT WORKS STANDBY SAFETY TEAM

Our Workforce Safety Unit staff are also able to provide specialist safety and rescue support to industrial sites and construction projects.

They normally work from a 4x4 or van based response unit carrying all their PFPE, rope access equipment, medical equipment including defibrillator, resuscitators and trauma kits and any additional specialist rescue equipment and PPE (Personal Protective Equipment) that they may need for the duty.

- Qualified and Experienced Safety & Rescue Staff
- Specializing in Remote and Hazardous Environment Casualty Care.
- Fully equipped to deal with any potential emergency.
- Friendly, uniformed staff members.
- Trained and Qualified Staff across a range of disciplines.
- Part of the company's Workforce Safety Unit.

## BESPOKE SOLUTIONS

We can provide solutions for all your first aid, rescue and health and safety needs that are tailored to the exact situation of your business or organization at any site.

## COST EFFECTIVE SOLUTIONS

We believe in a 'no hidden costs' approach in all of our invoicing. Any and all charges are clearly set out in our transparent pricing structure

## FACE TO FACE OR E-MEETINGS

While face to face meetings are often the 'best way' to do business. We do understand that due to the distances involved at times communications may have to be via email or eMeetings, especially in the post-covid 19 world.

## **ADDITIONAL SAFETY SERVICES**

### **INCIDENT MANAGEMENT**

Our Incident Response Officers can work at your site alongside the WAH Safety and Rescue Team to help with the coordination of works before an incident takes place as well as being the point of call for incident management during the shift taking the pressure of your management and safety team.

All our Incident Response Officers have been trained in Major Incident Management and emergency planning—with some undertaking an MSc in the subject—and communications and are initially trained and operational in medical care and/or technical rescue roles.
